

English360 LMS

User Experience Case Study

Designing a comprehensive learning management system for
modern language education with Google Workspace
integration and native mobile applications

Project Overview

English360 required a complete digital transformation to manage their growing language school operations. The challenge was to create an enterprise-grade learning management system that would work seamlessly across web and mobile platforms while integrating with existing Google Workspace infrastructure.

Project Goals

Business Objectives

- Reduce administrative overhead by 70%
- Enable 24/7 student registration
- Automate scheduling and progress tracking
- Scale to 500+ concurrent users

User Experience Goals

- Intuitive mobile-first interface
- Real-time progress visibility
- Seamless calendar integration
- Offline functionality support

Key Challenges

Technical Constraints

- Budget limitations requiring no-code solution
- Google Sheets performance limitations

User Requirements

- Three distinct user roles with different needs
- Multi-timezone support for global

- Native mobile app requirements
- 12-week delivery timeline

students

- CEFR level tracking and progression
- Instructor performance analytics

User Research & Personas

Primary User Types

Students

Primary Needs:

- Easy lesson booking and rescheduling
- Clear progress tracking with CEFR levels
- Mobile access for on-the-go learning
- Assignment submission and feedback
- Transparent credit balance visibility

"I need to see my progress and book lessons while commuting"

Teachers

Primary Needs:

- Complete student roster with notes
- Schedule management and availability
- Quick assignment grading interface
- Progress reporting tools
- Earnings transparency

"I need to manage 30+ students efficiently from my phone"

Administrators

Primary Needs:

- Real-time system overview
- User management and permissions
- Financial reporting and analytics
- Schedule conflict resolution
- Teacher performance monitoring
- Student retention tracking
- Capacity planning tools
- Data export capabilities

"I need complete visibility across all locations and operations"

Key User Insights

Mobile Usage Patterns

Notification Preferences

60% of student interactions happen on mobile devices during commute times. Native app experience was critical for adoption.

Users wanted automated reminders 24 hours before lessons but were frustrated by excessive notifications.

User Journey Mapping

Student Journey

1 Discovery & Registration

Student visits English360.ca, browses instructors, completes online registration with language selection and CEFR level assessment.

2 Onboarding

Receives welcome email, downloads mobile app, completes profile setup, and schedules first lesson.

3 Active Learning

Attends lessons via calendar integration, submits assignments, receives feedback, tracks progress dashboard.

Teacher Journey

1 Morning Preparation

Reviews schedule, accesses student profiles, downloads lesson materials via mobile app.

2 Lesson Delivery

Conducts lesson, marks attendance in real-time, takes notes on student performance.

3 Post-Lesson Tasks

Submits lesson report, assigns homework, grades assignments, updates progress tracking.

Technical Architecture

Technology Stack

Platform Components

- Google AppSheet for no-code development
- Google Sheets as cloud database
- Google Workspace for authentication
- Power BI for analytics and reporting
- Native iOS and Android app generation

System Capabilities

- Supports 500+ concurrent users
- 99.9% uptime SLA
- Offline functionality with sync
- Real-time collaboration
- Enterprise-grade security (PIPEDA compliant)

Development Timeline (12 Weeks)

Weeks 1-3

Foundation Setup

Google Workspace configuration, data structure design, AppSheet connection, user authentication implementation

Weeks 4-6

App Development

Mobile and web app generation, UI customization for three user roles, business logic implementation

Weeks 7-9

Integration & Testing

Gmail/Calendar integration, Power BI dashboard setup, comprehensive user acceptance testing

Weeks 10-12

Deployment & Training

Production deployment, staff training sessions, documentation, 30-day post-launch support

Key Achievements

User Experience Excellence

- Native mobile apps on iOS and Android
- Intuitive interfaces requiring minimal training
- Automated workflows reducing manual tasks
- Real-time progress visibility for all users
- Seamless Google Workspace integration

Technical Innovation

- Rapid development using no-code platform
- Enterprise-grade security and compliance
- Scalable architecture for future growth
- Offline functionality with data sync
- Advanced analytics capabilities

Lessons Learned

- No-code platforms enable rapid MVP validation
- Mobile-first approach drives adoption
- User research prevents costly redesigns
- Automated workflows deliver immediate ROI

- Scalability planning essential from day one
- Clear user journeys simplify complex systems

Project Value

This project demonstrates the power of user-centered design combined with modern no-code platforms to deliver enterprise-grade solutions rapidly and cost-effectively. By focusing on core user needs and leveraging existing infrastructure, we achieved 90% cost savings compared to traditional development while delivering native mobile applications and comprehensive web portals in just 12 weeks.

Thank You

This project demonstrates the power of user-centered design combined with modern no-code platforms to deliver enterprise-grade solutions rapidly and cost-effectively.
